

Ananth Maddula

Data Scientist at Deloitte USI

Analytical and inquisitive data professional with 2+ years of experience at Deloitte, specializing in statistical modeling, deep learning, Generative AI, and end-to-end data pipeline development. Skilled in building predictive models, applying advanced machine learning techniques, developing GenAI-powered chatbots, and delivering AI-driven solutions to enhance internal operations and decision-making.

WORK EXPERIENCE

Data Scientist Deloitte USI

06/2023 - Present

Hyderabad

Achievements/Tasks

- Handled deployment and data operations on SAP HANA, ensuring data integrity and availability for downstream processes.
- Built and maintained ETL pipelines in Microsoft Fabric following the Medallion architecture to support scalable and modular data processing.
- Built an NLP-driven chatbot integrated with multiple relational tables to automate query responses and report generation reducing dependency on data and Power BI teams, and **lowering support costs**.
- Streamlined access to real-time insights for leadership through a self-service chatbot, significantly **reducing time** spent searching through reports and dashboards.
- Applied machine learning techniques including predictive modeling (Linear Regression, Logistic Regression, Decision Trees, Random Forest, XGBoost, Time Series forecasting with ARIMA, SARIMAX, Prophet) and unsupervised learning (Clustering with K-Means, DBSCAN) to solve diverse business problems.
- Optimized space utilization and future capacity planning by developing predictive models that enabled stakeholders to identify over and under utilized areas across buildings and floors supporting data driven decisions to expand or reallocate space.
- Performed EDA using NumPy, pandas, matplotlib, and seaborn to uncover trends, outliers, and patterns. Engineered features through datetime manipulation, aggregations, and encoding to improve model accuracy. Analyzed relationships using statistical plots and correlation matrices for informed feature selection. Tuned forecasting parameters with scikit-learn and visualized results with Plotly to highlight key trends and anomalies, while leveraging TensorFlow for building and refining deep learning models.

Data Analyst Intern Deloitte

01/2023 - 03/2023

Hyderabad

Tasks

- Worked with SQL in both SQL Server and SAP HANA to extract, transform, and analyze data, and developed interactive Power BI dashboards to support data-driven decisions.

EDUCATION

Bachelor of Technology (B.Tech)

Gandhi Institute of Technology and Management (GITAM)

06/2019 - 04/2023

CGPA: 8.96

Courses

- Computer Science and Engineering

SKILLS

Programming & Tools: Python, SQL (SQL Server, SAP HANA), Power BI, Azure Synapse, Microsoft Fabric, Azure Databricks

Modeling & Analysis: Predictive Modeling, Statistical Analysis, Feature Engineering, Exploratory Data Analysis (EDA)

Core Techniques: Machine Learning, Deep Learning, Time Series Forecasting, Generative AI, Natural Language Processing

ACHIEVEMENTS & AWARDS

Hackathon

Won internal company hackathon for developing an AI-powered solution that significantly and reduces time, minimizes manual effort, and optimizes workforce requirements.

Awards

Recognized with multiple Spot and Applause awards for consistent excellence, technical expertise, and effective team collaboration.

PROJECTS

Conversational SQL Chatbot & Power BI Report Generation

- Developed and deployed a production-grade chatbot using Azure OpenAI, langchain that converts natural language queries into SQL and returns relevant answers in natural language.
- Integrated dynamic Power BI report generation, allowing users to create interactive visualizations directly from natural language queries.

Time Series Forecasting for Resource Utilization

- Developed Prophet model to forecast meeting rooms and badge swipe usage, incorporating holidays and seasonality to optimize space planning and capacity management

Migrated Data Platform

- Led the migration of an existing data warehouse from Azure synapse analytics to Microsoft fabric, resulting in improved performance, scalability and reduce costs by adopting the Medallion architecture.

CERTIFICATES

Microsoft Certified: Azure AI Fundamentals (AI-900)

Microsoft Certified: Fabric Analytics Engineer Associate (DP-600)

Udemy: Complete Data Science, Machine Learning, Deep Learning, NLP Bootcamp
